

## CMS+ for ServiceNow

The Stave CMS+ for ServiceNow application provides an extension to the existing Content Management System application allowing the use of 14 new Content Blocks, all of which can be configured with just a few clicks.

Our CMS+ applications can significantly cut down your content management implementation costs by allowing system administrators to create CMS Sites with little to no knowledge of CSS or HTML. The Stave CMS+ application can be used by new clients that want to have a modern

website by the time their full implementation goes live or by existing clients that are looking to redesign their site and have a product that can be easily maintained in the future.

### Key Features Include

- » Supports mobile devices with no additional configuration required
- » ESS template provided
- » 6 new menu types
- » 14 new content blocks
- » Import custom fonts
- » Uses twitter bootstrap
- » Implements fontAwesome

## KEY FEATURES

Fully responsive sites with minimum coding required.

### CMS+ Alert Container

Alert containers provide a way to present messages to users targeted based on Dates, Roles or Conditions

### CMS+ BxSlider

Implements an image carousel to provide an eye catching block to any home page. Each slider is fully configurable from the way slides transition to the amount of time spent on each slide. Images can also include text overlays or even other content blocks

### CMS+ Custom Fonts

With custom fonts you can achieve the next level of customization by importing your own fonts either via attachments or via a link (i.e: Google Fonts)

### CMS+ Data Table

Data Tables implement JQuery Data Tables to provide an easy to configure table of elements with a predefined filter applied to it. All table formatting can be applied either via CSS classes or on the table record itself

### CMS+ Jumbotron

Jumbotrons are ideal for page titles or for presenting information on the page that will stand apart from all other content

### CMS+ List

CMS+ List provide a modern approach to CMS lists by allowing styling of list elements on the list record itself. Similar to out of box CMS lists, these list will allow users to select a renderer to format the information being presented

### CMS+ Media Object

Media Objects allow users to enter embed code to present content from external sites such as videos, animations, audio, etc

### CMS+ Menus

CMS+ menus provide 6 new menu types with extended styling options and display configurations. All links can be target to specific individuals and/or times. Links can also have scripts executed when clicked to allow capturing events for web analytics tools

## KEY FEATURES

Fully responsive sites with minimum coding required.

### CMS+ Modal Window

Modal windows are ideal for presenting content when a user first lands on a site or page. Modal windows can display static content or CMS/CMS+ content blocks

### CMS+ Navbar

Navbar can be used for displaying your company branding plus a combination of other content such as a navigation menu or search box.

### CMS+ Navbar

Navbar can be used for displaying your company branding plus a combination of other content such as a navigation menu or search box.

### CMS+ Pagination

Pagination allows users to divide a group of elements into pages. This is ideal when dealing with a large number of similar elements such as search results or list elements.

### CMS+ Panel

Panels provide a container to group content. Panels can also be used to achieve multi column layouts and also can include a header and a footer to add context to the content being shown.

### CMS+ Search Box

A search box can be used to submit a search against the sites search results display page or also to present search results as the user types on the screen.

### CMS+ Search Results

Search Results provide the ability to easily style results while still using the ServiceNow search engine.

### CMS+ Site Configuration

Site Configurations allow users to specify common elements and styles that will be used on a site or a group of pages.

### CMS+ Thumbnail

A Thumbnail allows to present images with information and links regarding its contents..

## About Stave

### Overview

Stave is professional software development firm focused on delivering functional Applications and Utilities for the ServiceNow platform.

We deliver software that helps to extend the platform across the enterprise, with a focus on enabling Shared Services organizations to deliver continued value to the organizations they support.

### ServiceNow Experience

The Stave team has more than 20 years of developing and integrating commercial business and shared services applications for Fortune 2000 businesses. We've brought that experience to the ServiceNow ecosystem to provide robust and flexible applications that let organizations transition and migrate legacy business processes to the platform, providing a single "platform of record" for business and organizational applications.

The open, integrated capabilities of the ServiceNow platform enable enterprise service management to include business

process management, workflow, field service, configuration management, automation, visualization, reporting, dash-boarding, and 3rd party system integration.
